## DETAILED ACTION

### *Specification*

1. The spacing of the lines of the specification is such as to make reading and entry of amendments difficult. New application papers with lines double spaced on good quality paper are required.

2. The disclosure is objected to because of the following informalities:

Page 5, last line is illegible.

Appropriate correction is required.

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Stringer (4,819,987).

Stringer discloses an extendable footrest or leg rest for a passenger seat. An actuation assembly 30 is the driving means for extending the leg rest. In the disclosure, it should be noted “many types of actuation assemblies are feasible” but “only a preferred hydraulic assembly will be described” (col.2, lines 19-21). The actuation assembly 30 includes a pressure relief system, “which permits retraction of footrest 20 when a predetermined load is applied on the footrest 20 toward the stowed position without actuating the control button” (col.3, lines 2-5).

Note that since the pressure release system immediately retracts when a

predetermined load is applied, it therefore becomes an alarming means for the passenger that unnecessary force is applied. Furthermore, the retracting footrest 20 has a stopping means in the stowed position, "the actuator 34 may contract and the footrest 20 may swing toward its stowed position" (col.3, lines 26-27).

### *Conclusion*

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kemmerer et al. (5,931,532), Sakakibara et al. (4,669,780), Mahalek et al. (6,223,467), Griesbach et al. (6,373,005), and Marais (6,267,445) all show various features of the claimed invention. Kemmerer discloses a power operated lift recliner, which includes sensors for deactivating the power lift mechanism when there is obstruction. Sakakibara discloses a device for controlling power seats in a vehicle, which includes detectors and switches for controlling a number of different operational states. Mahalek discloses a motor vehicle sensor arrangement for detecting jamming of an obstruction located at a movable vehicle part. Griesbach discloses a jamming-detection device in a power-operated element. Marais discloses a power-operated leg rest for a seat.
